the Black Range as to be practically part of it.

Rich in Gold and Silver.

"These ranges have beretofore attracted attention from the outside world principally for their rich gold and siver deposits, such as the famous silver mines of Kingston on the south, which produced several million dollars in a very short time, and the more recently discovered gold district of Fluorise on the north, which bids fair to rival or exceed the former district in production in the near future. But there are also other undeveloped resources of such magnitude that when fully known and appreciated they will sources of such magnifide that with fully known and appreciated they will doubtless prove of greater economic importance when developed than the mines of silver and gold. These consist of great belts of fine timber and great surface showings of extensive copper denosits. These resources when hetter known will inevitably induce development by adequate capital and ultimately the building of a railroad into the Black Hange.

the Black Hange.

Implicated the plus forests belong to the national government and are in the Datil National Forest. Only one saw mill is at present there, which is near Chloride.

mill is at present there, which is hear Chloride.

Two Great from Fields.

"There are two distinct from belts in that country, one only partially developed and the other wholly undeveloped. The partially developed from deposits lie seven miles east of Fluorine and are owned by parties in Fairview, N. M. They consist of over 300 acres of an Iron deposit, developed by numerous workings, the developed by his large body of commercial from one, being on the magnetite orier, which will average about 15 per cent from from the magnetic property alone would offer tonnage sufficient to induce the building of a railroad from El Paso or from the Santa Fe railroad to the Black Range.

Pange.

"The other iron field lies on the west slope of the condinental divide, in a heavily timbered country, ten miles west of Fluorine. On this iron belt but little development has been done. Its extent and magnitude is practically unknown. Only a few prospect holes have been sunk which show up considerable high grade bematite iron. Analyses of this ore show from 60 to 62 percent iron. From surface indication this is of volcanic origin. Experiments made of this ore show it makes excellent paint on the burnt umnakes excellent paint on the burnt um-

From surface showings undoubtedly development would show up wast hodies of this ors. It is easy of access for a railroad, as it lies on the only natural

MINING NEWS

(By L. H. Davis.)

A recent visit to the Potrillos, in Little Colt Mountains, which rise from the desert plains like an Island, some 32 miles west of El Paso, in Southern New Mexico, was a revelation to me, for I saw remarkably extensive deposits of marbles of various grades and colors, which, if developed as proposed by the owners, will be of considerable economic value to the southwest, especialy to El Paso.

The nearest railroad station is called

The nearest railroad station is called Portrillo, just 33 miles west of El Paso over the El Paso & Southwestern rail-Thence it is three miles north t the first outerop of the marble, in the extreme southeastern end of the main ridge of the Portrillo mountains. There are some six or seven claims located on these deposits, of 160 acres each, making a total of not quite 1600

Mountains Rich in Resoure The mountains of southern New Mexwonderfully prolific in their economics resources, non-metalic and metalic, to an extent perhaps scarcely realized by the inhabitants of El Paso and the southwest. Of marble and metamorphosed limestone, lirestones there are a great quantity and variety. There are five or six such deposits within a hundred miles of this city, but all of them I believe that those of the Portrillos are the most valuable.

Many Varieties of Murble. Many Varieties of Murble.

Now, when it is stated that nearly all varieties of marble are found in the different parts of the Portrillo mountains, some idea can be formed of the value of this remarkable discovery. These six placer claims have been located to cover the visible deposit on both sides of the eastern range.

Beginning at the southeastern end of the range, where it slopes into the plain

the range, where it slopes into the plain a little over a mile north of Portrillo station, is the Amsterdam claim, with station is the Amsterdam claim, with a gray ground with white zigzag stripes running through it. Adjoining the Amsterdam on the north is the Hustonian containing a white marble, with a rose tint running through it. Adjoining the latter on the northwest is the Batton, in which is a butte containing a beautiful solid gray marble, which when poished looks much like gray granite, also shell or fire fossiliferous marble. North of these is a vein of onyx on a neighboring hill, twenty feet wide and 150 long. East of the Batton lies the Panbelle, covering the eastern slope of the range through which runs a massive stratum of unknown thickness of beautiful white marble. At one place an opening has been made exposing some 25 feet wide and a vertical thickness of twelve feet of massive white marble, some of which f massive white marble, some of which like Parlan marble. On the eastern lope of the mountain the stratum of white marble appears to be over 50 feet in thickness, as exposed, with proba-bity of being thicker. The outcrop of bitty of being thicker. The outcrop of this stratum can be traced along the mountain side three quarters of a mile from south to north. North of the Fanbelle is the Hardy claim on which is a finer grained white marble, and on the north end a dark mottled Numidian marble, motied with red, light blue and grey, the beasty of which is indescribable. West of the Hardy, covering the western slope of the hills is the Duncan claim, on which is found solid yellow and motley blue and white marble.

All these marble deposits are massive, and comparatively unfractured and un-faulted, and when quarries are ade-quately opened, stones of largest com-mercial dimensions can be quarried suitable for monumental, ornamental and building purposes.

The Owners.

The Owners.

The locators of these claims are R.
R. Huston, capitalist, of Wharton, Tex.
F. J. Hardy of El Campo, Tex., president of the Hardy and Markham oil fields Co., R. B. Taylor, cashier of the Wharton Nalional Bank, and others, among whom are prominent people of New York. Mr. C. E. Batton, president

Description of Marble Quarpany, of Fort Worth, is the local representative of the owners. Plans are enfoot to open these marbles on an extensive scale, and to erect a plant to make them into finished product at or near them. El Paso, which will be the distributing point. The importance of such an industry may be understood when it is mentioned that the quarries of Carrera support 15,000 people, and that the Vermont marble quarries produce over six million dolars in marble per annum. The Rutland Marble works, at Rutledge, Vermont, is 1000 feet long and contains scores of giant saws, cutting up the marble into various shapes.

Lucal Marble Market.

Local Marble Market.

During the past two years there has been an unusually large demand for marble for the inside finishing and ornamental work in the new hotels and large business buildings in El Paso. It is estimated by one of the ladding is estimated by one of the leading ar-chitects that nearly half a million dol-lars' worth of the colored marbles have been imported into this city for this purpose, and it is believed that the de mand for this purpose has scarcely

### NEW OIL AND GAS WELL AT ARTESIA

Mrs. J. L. Williams Lets the Contract, to Go Down 3100 Feet.

Artesia, N. M., July 31.—The latest well to produce all and gas is that being drilled by Lewis Feemster on a self-base of land four miles southwest of Dayton, owned by some Italians of Trinidad Colo., and which was formerly to the Q. M. Fairchild tract Feemster was drilling for water and when he got his eight inch casing down to a depth of 700 feet he encountered gas, oll and water, the oil and water rising in equal parts a little over the casing. He stopped drilling and informed the owners of the situation. Local parties are securing leases from the Italians with a view of going on down for oil. From indications it is believed that oil in large quantities will be found at a depth of a few more hundred feet.

Mrs. J. L. Williams, the oil woman of Lakewood, is in Artesia enthusing the people over the prospects for oil. She has let a contract with the Biglow firm to go down 3190 feet on her quarter section 12 miles southwest of Lakewood. She has a map showing the various artesian wells south of Artesia in which oil has appeared in small quantities. These wells show a

various artesian wells south of Artesia in which oil has appeared in small quantities. These wells show a defined oil belt beginning about five miles southeast of Artesia, near the Pecos river, and extending in a southwesterly direction to her quarter section southwest of Lakewood. In this belt Mrs. Williams has oil lesses on 10,000 acres of land. She has interested a number of persons of Louisville, Ky., in her oil proposition and is very sanguine of success.

### PALOMA MINES ARE SOLD TO PENOLES CO.

Big Mining Deal Is Consummated at Monterey, Mex.

Monterey, Mexico, July 31.—One of the biggest mining deals to be made in this section was the taking over of the Paloma mines by the Penoles Mining company. During several months the Penoles company has been inspecting and testing the property under consideration and had deposited the sum of \$2.000.000 in the local branch of the National Bank of Mexico.

The Penoles company is contemplating the purchase also of the Cabrillas and Mariposas mines, which are situated in the same rich section as the Palomas mines.

Running up and down stairs, sweep-ing and bending over making beds will not make a woman healthy or beau-tiful. She must get out of doors, walk a mile or two every day and take Chamberlain's Tablets to improve her

J. B. DALE J. H. NATIONS J. M. GOGGIN Z. T. WHITE

Douglas Man Takes Up 12 Pertenencias of Progresso Group.

Douglas, Ariz, July 31.—The district of Moctexuma, which heretofore has had more mineral documents than all other districts of the Mexican republic, promises very few for the month of

The first denouncement for the

The first denouncement for the month was made in Moctexuma on the 17th, when H. W. Loomis took 12 pertenancias. known as the El Progreso. This group of claims lie three miles south and east of the famous Pilares mines of the Moctexuma Copper company, on the edge of the silver district near the Silver King and the Ague Buens. A large cropping of pyretic ore shows values in copper, gold and silver. Some assays have been made, all carrying values.

It is not thought that the country will even have to go through the reconstruction period, usually following a war, before it rapidly forges ahead. The cessation of hostilities is all that is necessary for a large influx of mining men, with the capital to back them, to operate the many properties which can be soon put on a dividend paying basis.

La Esquina, belonging to Messre.

can be soon put on a dividend paying basis.

La Esquina, belonging to Messrs.

Lindley, now under the management of Mr. Nourse, who is in San Francisco, is running a drainage tunnel 700 feet in length to unwater the ledge. As soon as this is accomplished, the exposed ore bodies will be sufficient to start producing on a regular basis. Morton Lindley is expected to arrive from San Francisco in the near future to examine the property.

The Naccoxari Consolidated Copper company, under the management of John Alexander, is pushing work on the 4000 foot tunnel to tap the main body of the district at a greater depth. Unexpected ore bodies are being encountered in the driving of this tunnel, some of which carry good values. Frank Borgeson has returned to the San Nicholas, which he has under lease from John Hohstadt, to begin work. Quantities of ore are being taken out averaging 20 ounces, among which is a fair sprinkling of high grade.

The Pilares is sinking its shaft to the 2000 foot level. Labor seems plentiful, many new men coming in looking for work, who have never before been seen in the district.

James Nolan and J. Baumann, who have been lensing the Metates property near Oputo, have denounced some claims of their own in that district and expect to begin work on them in the near future.

Thirty-one bars of bullion from El Tigre passed through this city lust week on their way to the refinery.

### EQUIPMENT ADDED TO MOGOLLON MINES

Oil Engines in the Errestine Plant Prove a Decided Success.

Mogolion, N. M., July 31.—At the Deadwood mines the erection of the new gallows frame and the resetting of the hoisting engine were accomplished in record time. The mine equipment is again complete and regular hoisting established. The new labeling catablished. The new Mater Coolers.

At the Ernestine Mining company, THE BEAUTIFUL GROVE, W. YSLETA.

the new oil engines are giving excel-lent service, permitting the operation of the plant better than 33 percent of the plant better than 32 percent running time. During the week 535 tons of ore were treated, yielding 78 sacks of high grade concentrates and the usual amount of precipitates, which are being smelted. The low weekly tonnage was due to shortage of water for a few days, but the summer rains have started and there will doubtless be an ample flow. In the creeks for the continuous operation of all the mills henceforth.

all the mills henceforth.

At the Oaks company, the week's development on the Pacific and Johnson mines yielded 70 tons of ore, which was sent to the Deadwood mill. The last 115 tons treated from these mines averaged \$22 per ton.

The Mogolion Gold & Copper company production from the Little Charlie mine is steadily increasing and the grade is excellent.

Deep Down leasers continue to send a good tonnage of ore to the custom mill.

# A Saver Who "Made

HORACL GREELEY. Founder, The N. Y. Tribuns. A Self Made Man-His Name Will Always Last.

Horace Greeley's boyhood was one of hardship and strife. When he arrived in New York his sole possessions were the very few clothes he wore.

The story of Greeley's early struggles reads like a tale of fiction. No obstacle was too great for him to surmount. No task was too hard. Compositor, foreman, reporter, editor and finally founder of the New York Tribune, the pioneer penny newspaper. Horace Greeley's policy and life were one-constructive, an aim and earnest endeavor for good-a preventive, so far as he was able, of all that

was bad. Debt Greeley abhorred. His advice to young and old was always "Save-live within your means no matter how small they be-if you have but 50 cents buy a peck of corn, parch it, and live on it rather than

owe a penny." A young man who begins to save is building for the future. A savings account is a better recommendation in El Paso than that of being a spender. Start a savings account with us; 4 per
